

America's Natural Gas Highway: The Clean Energy Solution

Trucks powered by cleaner, cheaper and All-American natural gas will soon travel the country on **America's Natural Gas Highway**. We are building a network of LNG truck fueling stations on the Interstate Highway System and in major metropolitan areas. Soon, natural gas fueling infrastructure will be ready to serve long-haul trucks traveling across the USA as well as regional trucks working within local areas.

America's Natural Gas Highway: The Clean Energy Solution

LNG Plant

Clean Energy is America's largest provider of natural gas fuel for transportation — your connection to natural gas fueling.

We build, operate and maintain fueling stations that compress and dispense compressed natural gas (CNG) fuel for light- and medium-duty vehicles and dispense liquefied natural gas (LNG) fuel for heavy-duty vehicles.

Trucks powered by cleaner, cheaper, domestic natural gas will soon travel the country on **America's Natural Gas Highway**, our network of LNG truck fueling stations on Interstate Highways and in major metropolitan areas.

The first phase includes 150 fueling stations with approximately 70 anticipated to be open in 33 states by the end of 2012 and the balance in 2013. Many will be co-located at Pilot-Flying J Travel Centers already serving goods movement trucking.

The opening of these stations coincides with the expected arrival of new natural gas truck engines well suited for heavy-duty, over-the-road trucking.

In 2011, supporting the transition of trucking from diesel to natural gas fuel, we raised a total of \$450 million investment in Clean Energy to help fund the development of these stations and other capital projects from Chesapeake Energy Corporation (NYSE: CHK), the nation's second largest natural gas producer, Boone Pickens, our Co-Founder, and a group of international investors.

We believe the time is right for taking this action to build the national LNG fueling infrastructure.

We look forward to serving truckers and shippers on **America's Natural Gas Highway**.

LNG truck fueling

- Can save up to \$1.50 per gallon or more based on market conditions
- High-mileage truck incremental cost payback less than a year
- Lowers greenhouse gas emissions
- Helps reduce the use of imported oil
- Creates jobs in America
- Helps grow our economy

We want to hear from truck fleets and shippers about your needs for LNG fueling stations. Let us know where we can expand the highway network to support your deployment of LNG trucks.
